

Resume / Career Profile

Name	Cheonsoo Kang
Target Position	Senior Software Engineer / Financial Systems Engineer / Middleware & Transaction Tracking System Engineer
Email	[To be filled in]
Phone / Location	[To be filled in] / [To be filled in]

Professional Summary

Senior software engineer with extensive experience in financial communication systems and mission-critical transaction tracking systems. Strong background in developing communication software for inter-bank systems and financial institution integrations, including bank-to-bank and bank-to-insurance company data exchange systems.

Experienced in a wide range of communication technologies, from RS-232C to TCP, UDP, HTTPS, and Web API-based integrations. Participated in the development of a Transaction Tracking System in collaboration with HP Korea, designed to trace financial transactions passing through Web servers, WAS, middleware, Tuxedo, Tmax, and other enterprise system layers.

Strong hands-on experience with C, C++, Java, JNI, C#, and JavaScript, with a focus on reliability, traceability, fault analysis, and stable operation in mission-critical banking environments.

From 1991 to 1992, worked for approximately one year at Fujitsu in Japan, participating in the development of video communication software and gaining hands-on experience in real-time communication software development.

The Transaction Tracking System developed in collaboration with HP Korea won first place in a global HP software competition with entries from 102 countries.

Core Competencies

- Financial communication system design and development
- Inter-bank and financial institution system integration
- RS-232C, TCP, UDP, HTTPS, and Web API-based communication
- Mission-critical system development
- Transaction tracking and transaction monitoring systems
- Transaction flow analysis across Web, WAS, and middleware layers
- Middleware integration with Tuxedo, Tmax, and enterprise platforms
- C/C++, Java, and JNI-based system development
- C# and JavaScript-based business application development
- Fault tracking, log analysis, and transaction flow diagnostics
- Reliability-focused software development for financial environments
- Video communication software development
- Work experience at Fujitsu in Japan
- Development experience with a globally awarded HP software solution

Technical Skills

Programming Languages	C, C++, Java, C#, JavaScript
Communication / Network	RS-232C, TCP/IP, UDP, HTTPS, Web API, Socket

	Programming
Middleware / Enterprise Systems	Tuxedo, Tmax, WAS, Web Server, Middleware Integration
System Domains	Financial Communication Systems, Transaction Tracking Systems, Mission-Critical Systems, Banking System Integration
Database / Tools	SQL, Oracle, MS SQL Server, Visual Studio, Eclipse, and other development and operational tools

Professional Experience

Video Communication Software Development at Fujitsu Japan

Period: 1991 - 1992

Company / Location: Fujitsu, Japan

Role: Software Developer

Responsibilities

- Participated in the development of video communication software
- Developed software related to real-time communication and video/audio data processing
- Contributed to stability and performance improvements for communication-based applications
- Worked in a Japanese development environment with local engineering teams

Technologies

C, C++, Communication Software, Video Communication, Real-time System

Key Achievements

- Gained approximately one year of hands-on development experience at Fujitsu in Japan
- Built foundational experience in communication software and real-time multimedia systems

Financial Institution Communication System Development

Period: [To be filled in]

Role: System Designer / Software Developer / Technical Support Engineer

Responsibilities

- Designed and developed data communication software between banks and other financial institutions
- Built communication modules for bank-to-bank and bank-to-insurance company integrations
- Implemented communication systems using RS-232C, TCP, UDP, HTTPS, and Web API
- Developed stable and reliable financial data transmission systems
- Supported troubleshooting, fault analysis, and recovery in production environments
- Customized systems based on customer requirements

Technologies

C, C++, Java, C#, TCP/IP, UDP, HTTPS, Web API, Socket Programming

Key Achievements

- Delivered reliable financial data exchange systems for financial institutions
- Developed flexible communication software supporting multiple protocols
- Gained extensive experience in high-reliability financial production environments

Transaction Tracking System Development in Collaboration with HP Korea

Period: [To be filled in]

Partner: HP Korea

Role: Core Module Developer / System Designer / Transaction Tracking Engineer

Responsibilities

- Designed and developed transaction tracking software for banking systems
- Implemented transaction flow analysis across Web, WAS, and middleware components
- Developed tracking functions for Tuxedo and Tmax-based middleware environments
- Built core system modules using C/C++
- Developed Java and JNI-based integration modules
- Implemented functions to analyze transaction delays, failures, and missing transactions
- Developed software for stable operation in mission-critical production environments

Technologies

C, C++, Java, JNI, Tuxedo, Tmax, WAS, Middleware, Transaction Monitoring

Key Achievements

- Developed a system that won first place in a global HP software competition with entries from 102 countries
- Improved visibility into transaction flows in mission-critical banking systems
- Reduced time required for fault analysis and transaction tracing
- Gained enterprise-level system development experience through collaboration with HP Korea

Professional Profile

I am a senior software engineer with long-term experience in financial communication systems and transaction tracking systems. My strengths are not limited to application development; I have extensive experience in financial data communication, middleware integration, real-time transaction tracking, and fault analysis in environments where reliability and stability are essential.

I am proficient in C, C++, Java, C#, and JavaScript, with strong experience in C/C++ system programming and Java/JNI integration. I also have broad experience in communication technologies ranging from traditional RS-232C interfaces to modern TCP/IP, UDP, HTTPS, and Web API-based communication.

My key strength is the ability to understand both legacy and modern systems and to design stable, traceable, and maintainable software for mission-critical enterprise environments.
